

ARKLIGHT POWER – FOUNDERS DECK

Power Until He Comes Again.Faith-Fueled Clean Energy Infrastructure for the Kingdom.

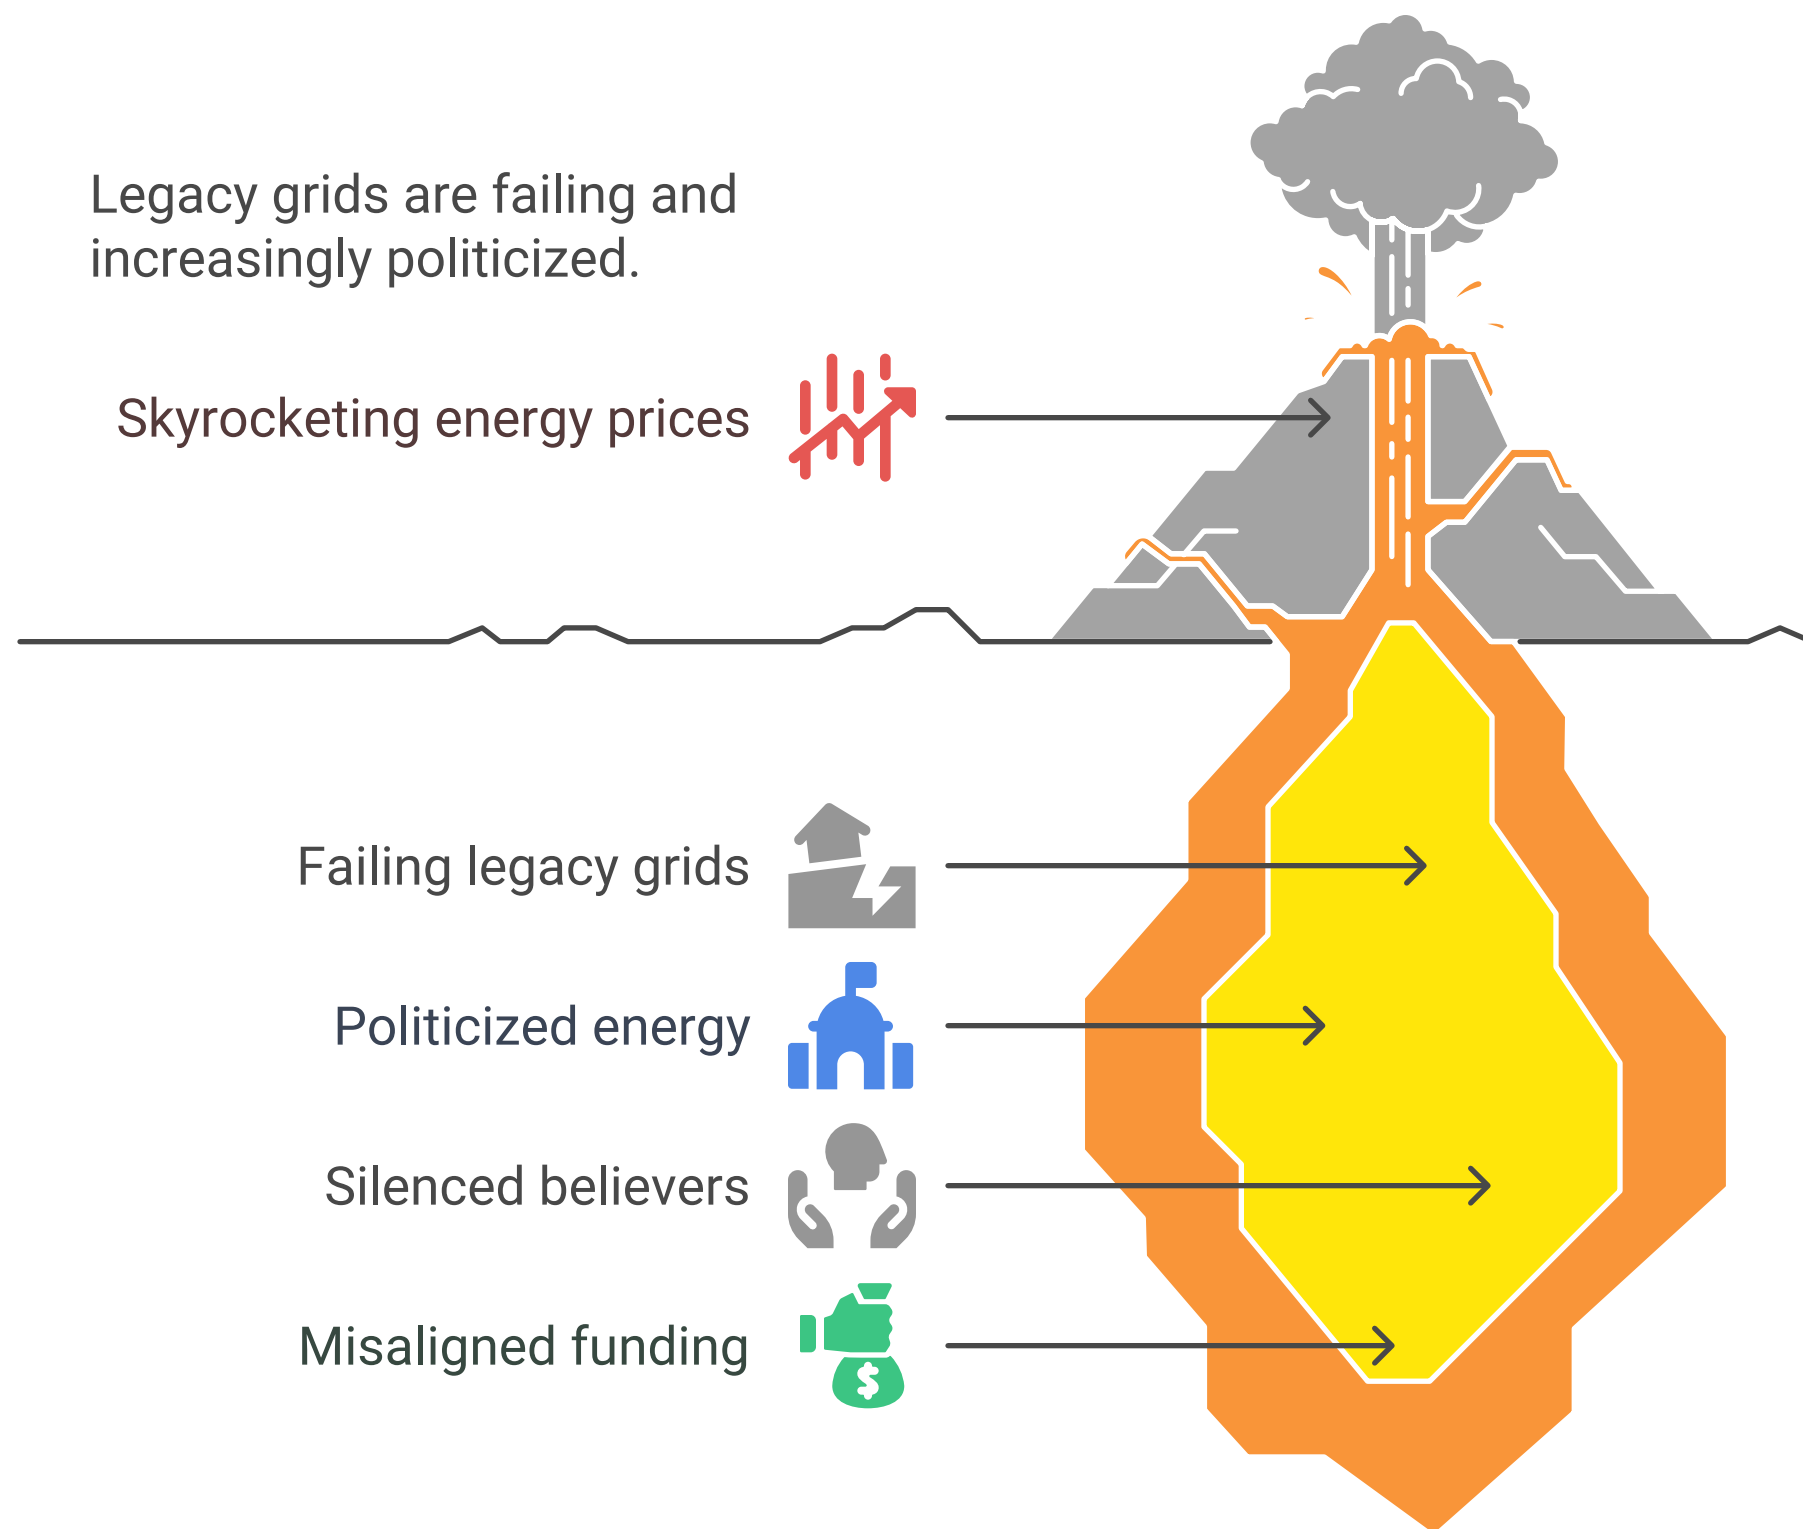

The Vision

- ARKLight Power is a decentralized clean energy platform designed to serve the Kingdom.
- We harness geothermal and modular nuclear power to fund missions, media, and mercy work.
- Our goal is simple: build energy independence for believers, while tithing from the profits to fuel global impact.

The Problem

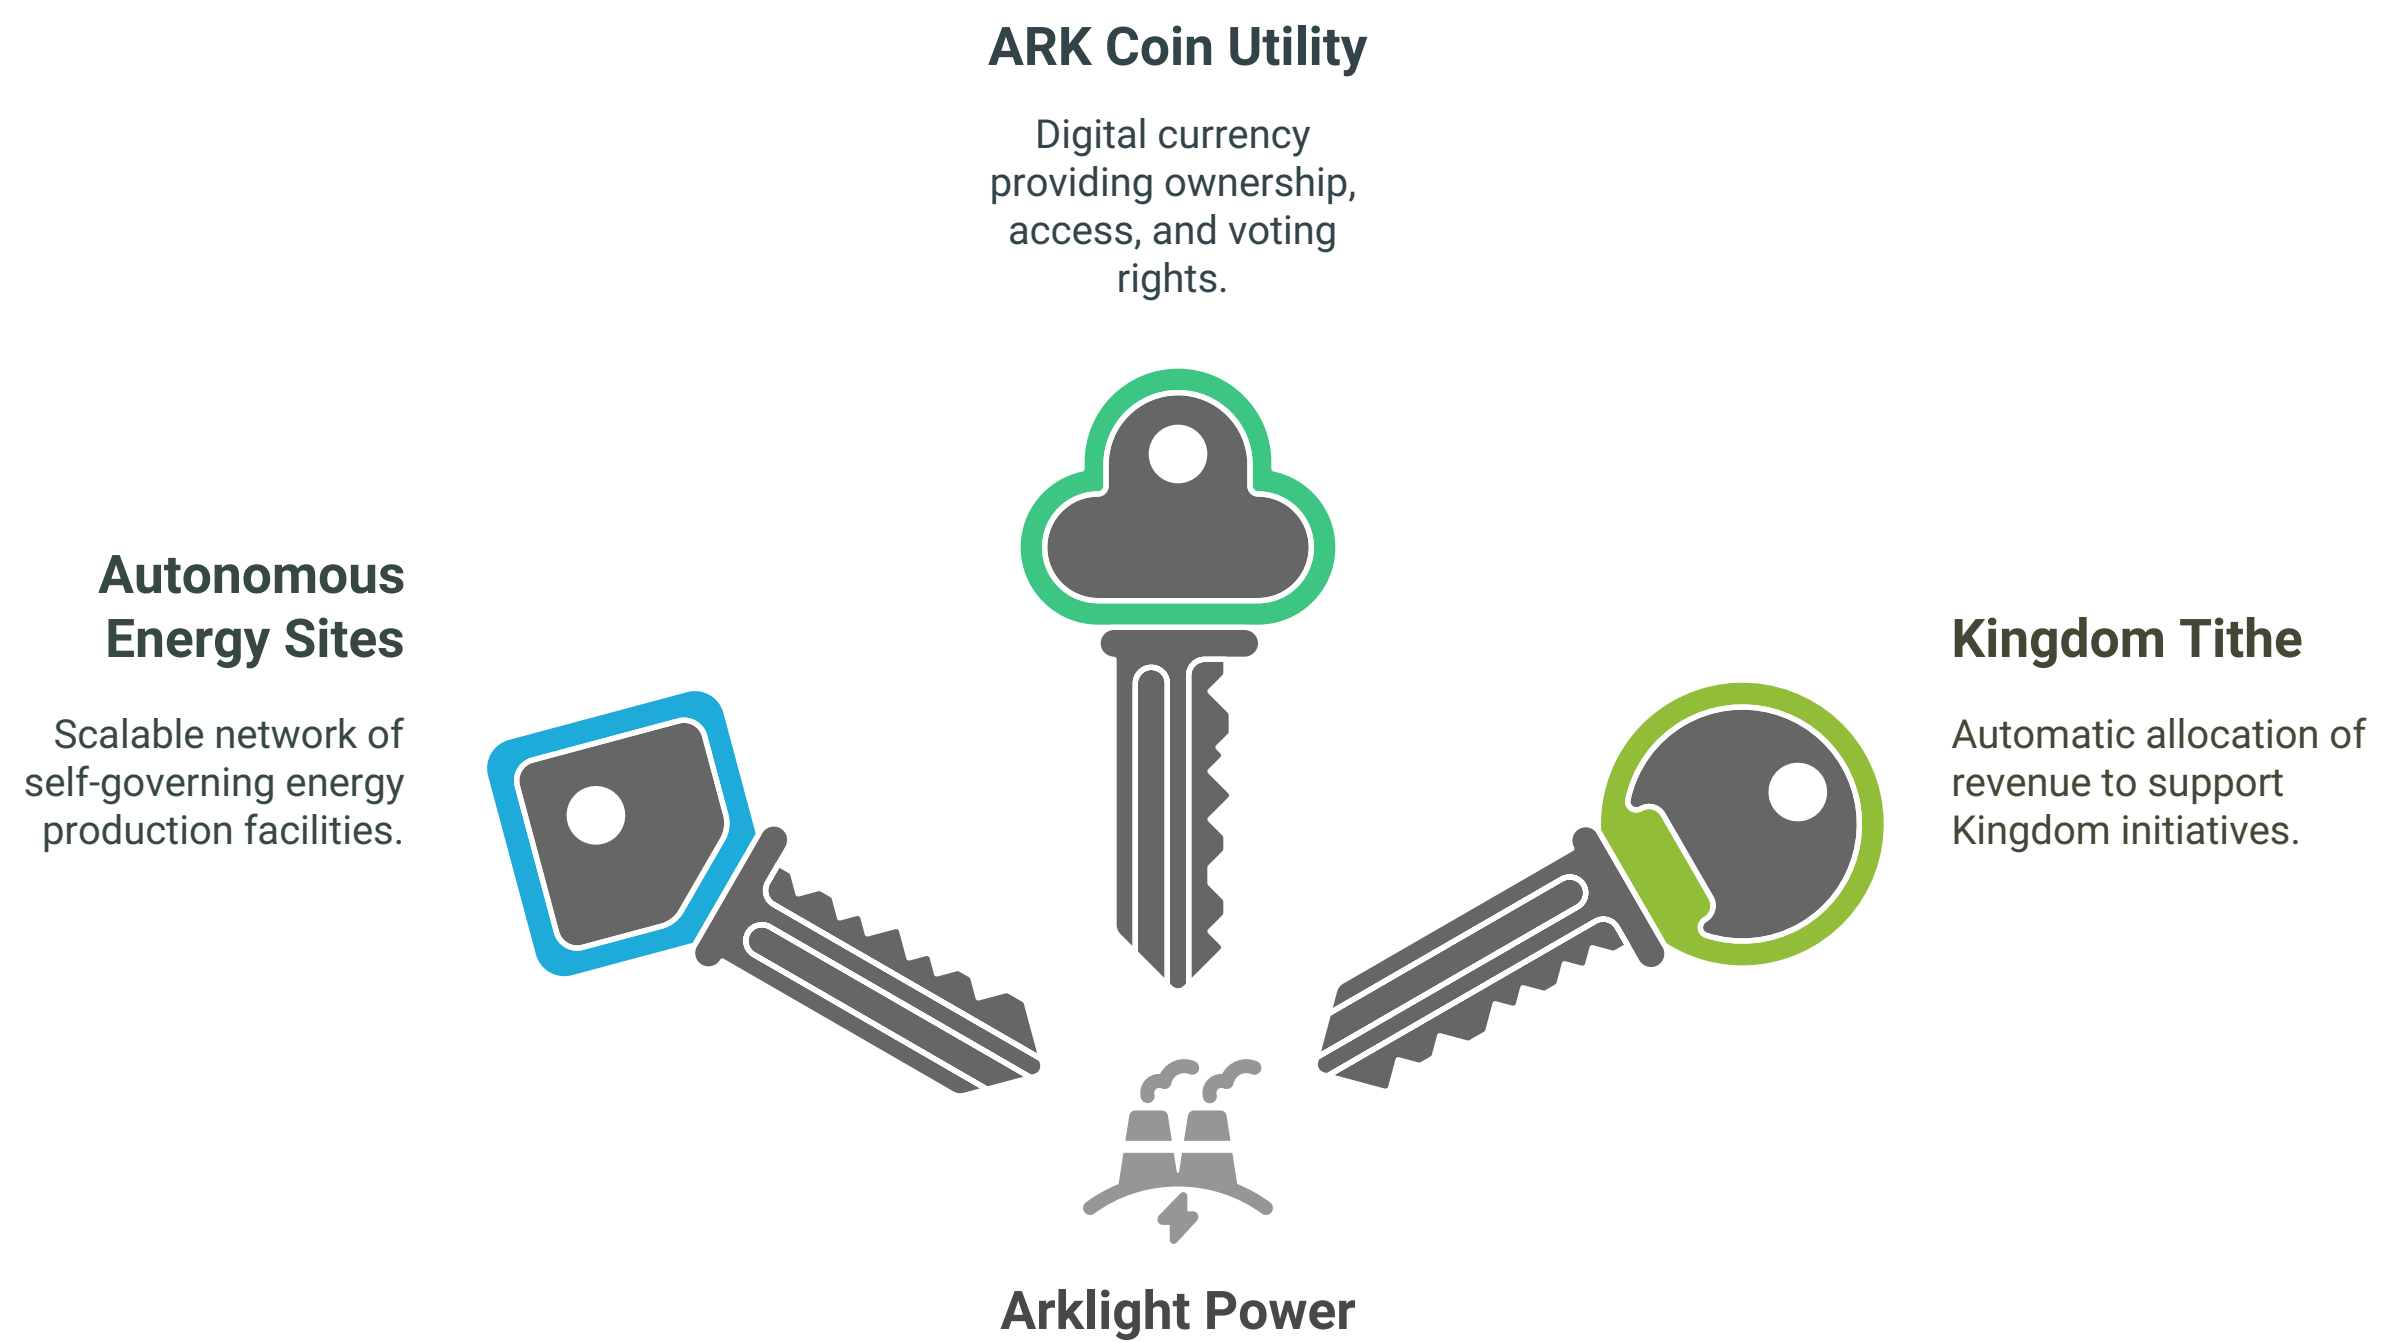

- Legacy grids are failing and increasingly politicized.
- Energy prices are skyrocketing while believers are silenced or de-platformed.
- Faith-driven communities continue funding systems that oppose their values.

The Solution

- We're building a scalable network of autonomous energy sites.
- ARK Coin provides ownership, access, and voting power in this system.
- 10% of all net revenue is tithed—automatically—to fund vetted Kingdom initiatives.

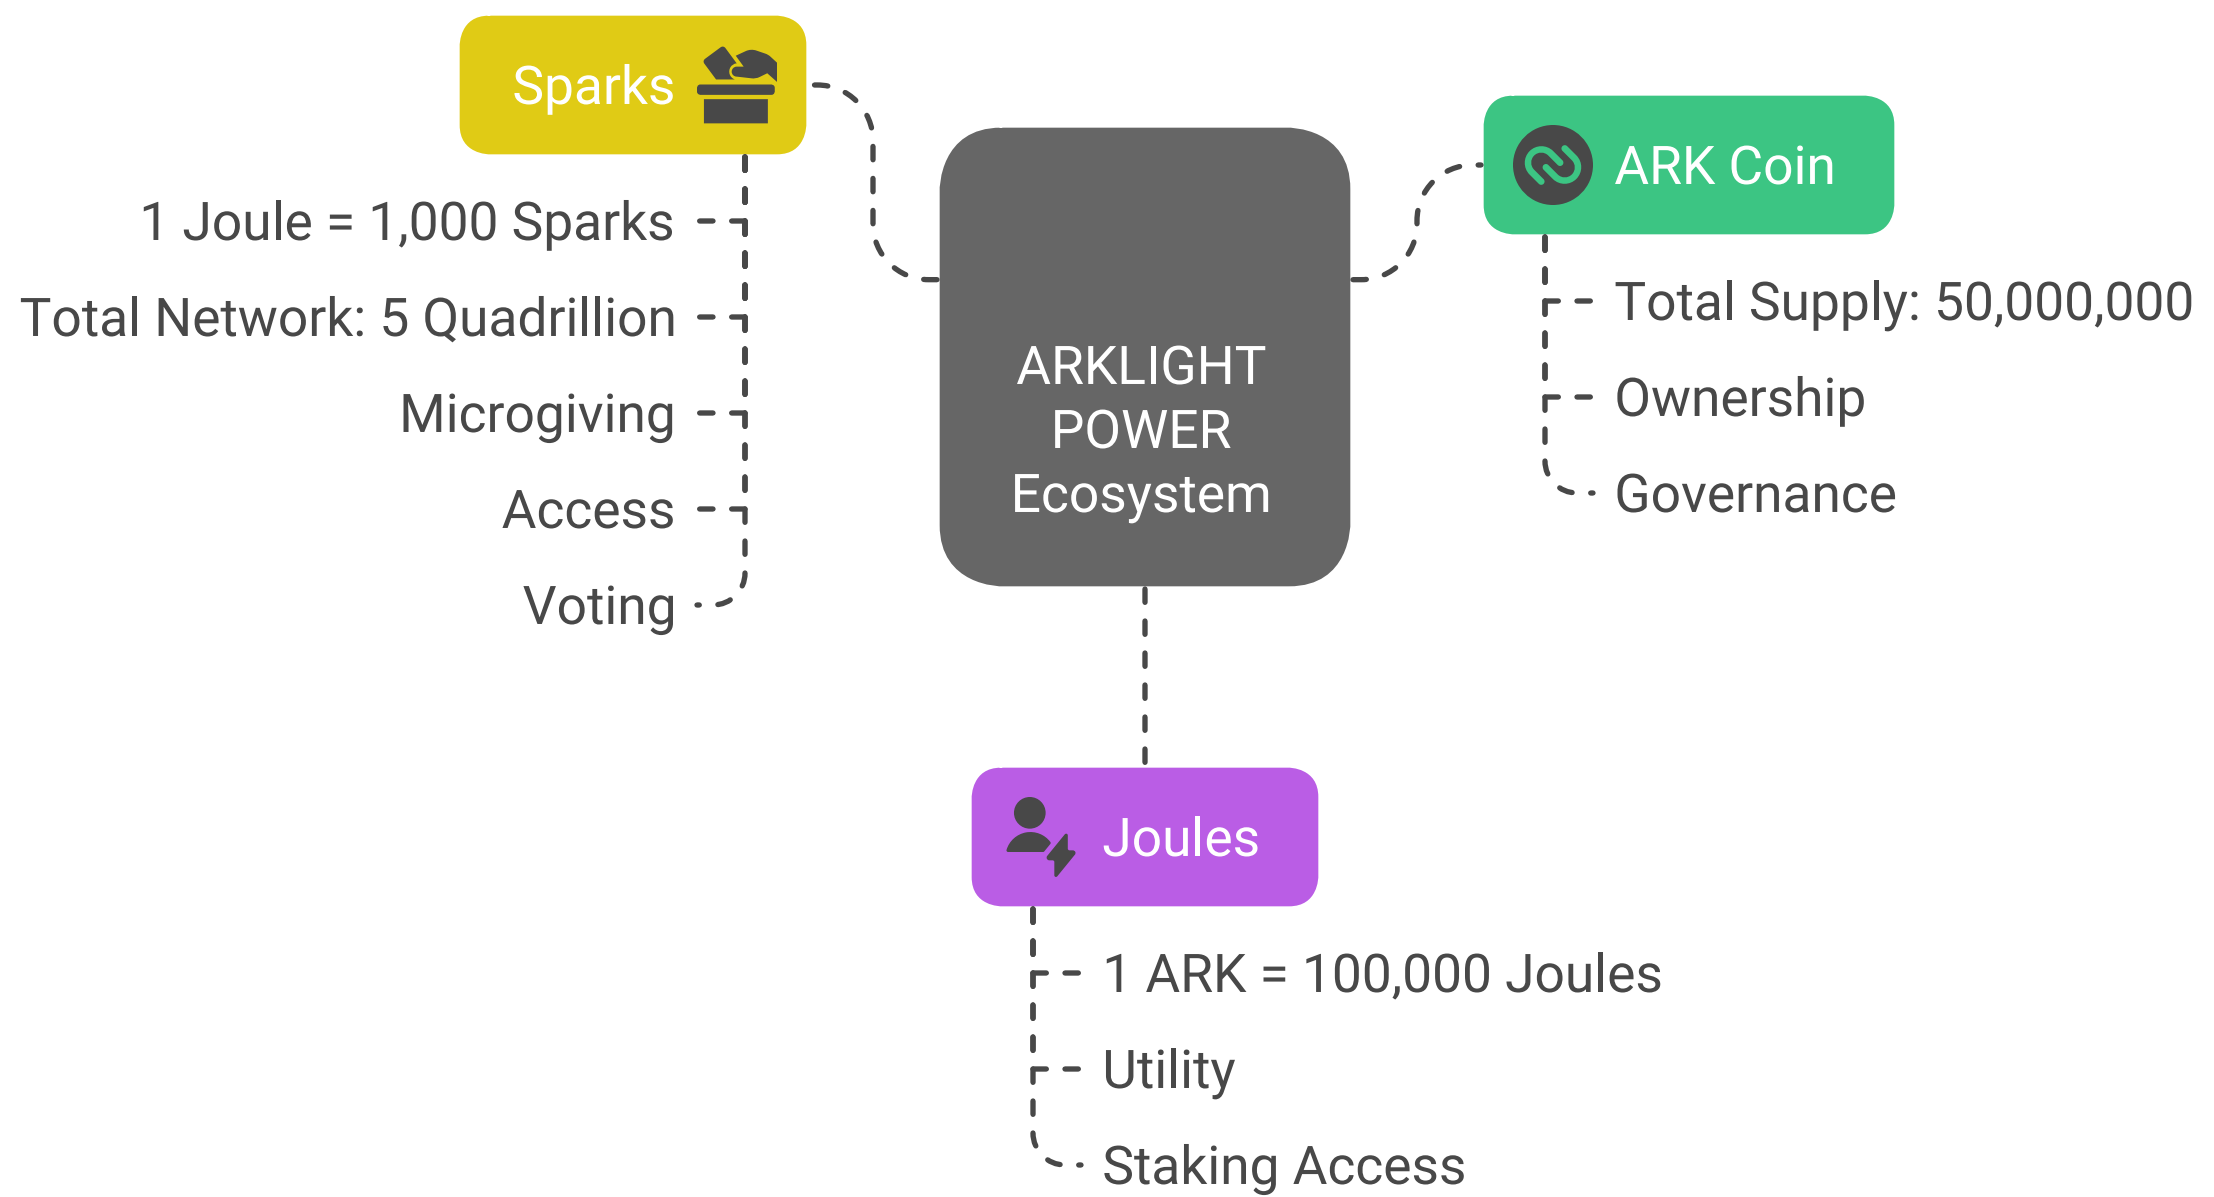

Core Components of Arklight Power

The ARK Coin Model

- Total Supply: 50,000,000 ARKs
- 1 ARK = 100,000 Joules
- 1 Joule = 1,000 Sparks
- Total Network: 5 Quadrillion Sparks
- • ARK = Ownership + Governance
- • Joules = Utility + Staking Access
- • Sparks = Microgiving, Access, and Voting

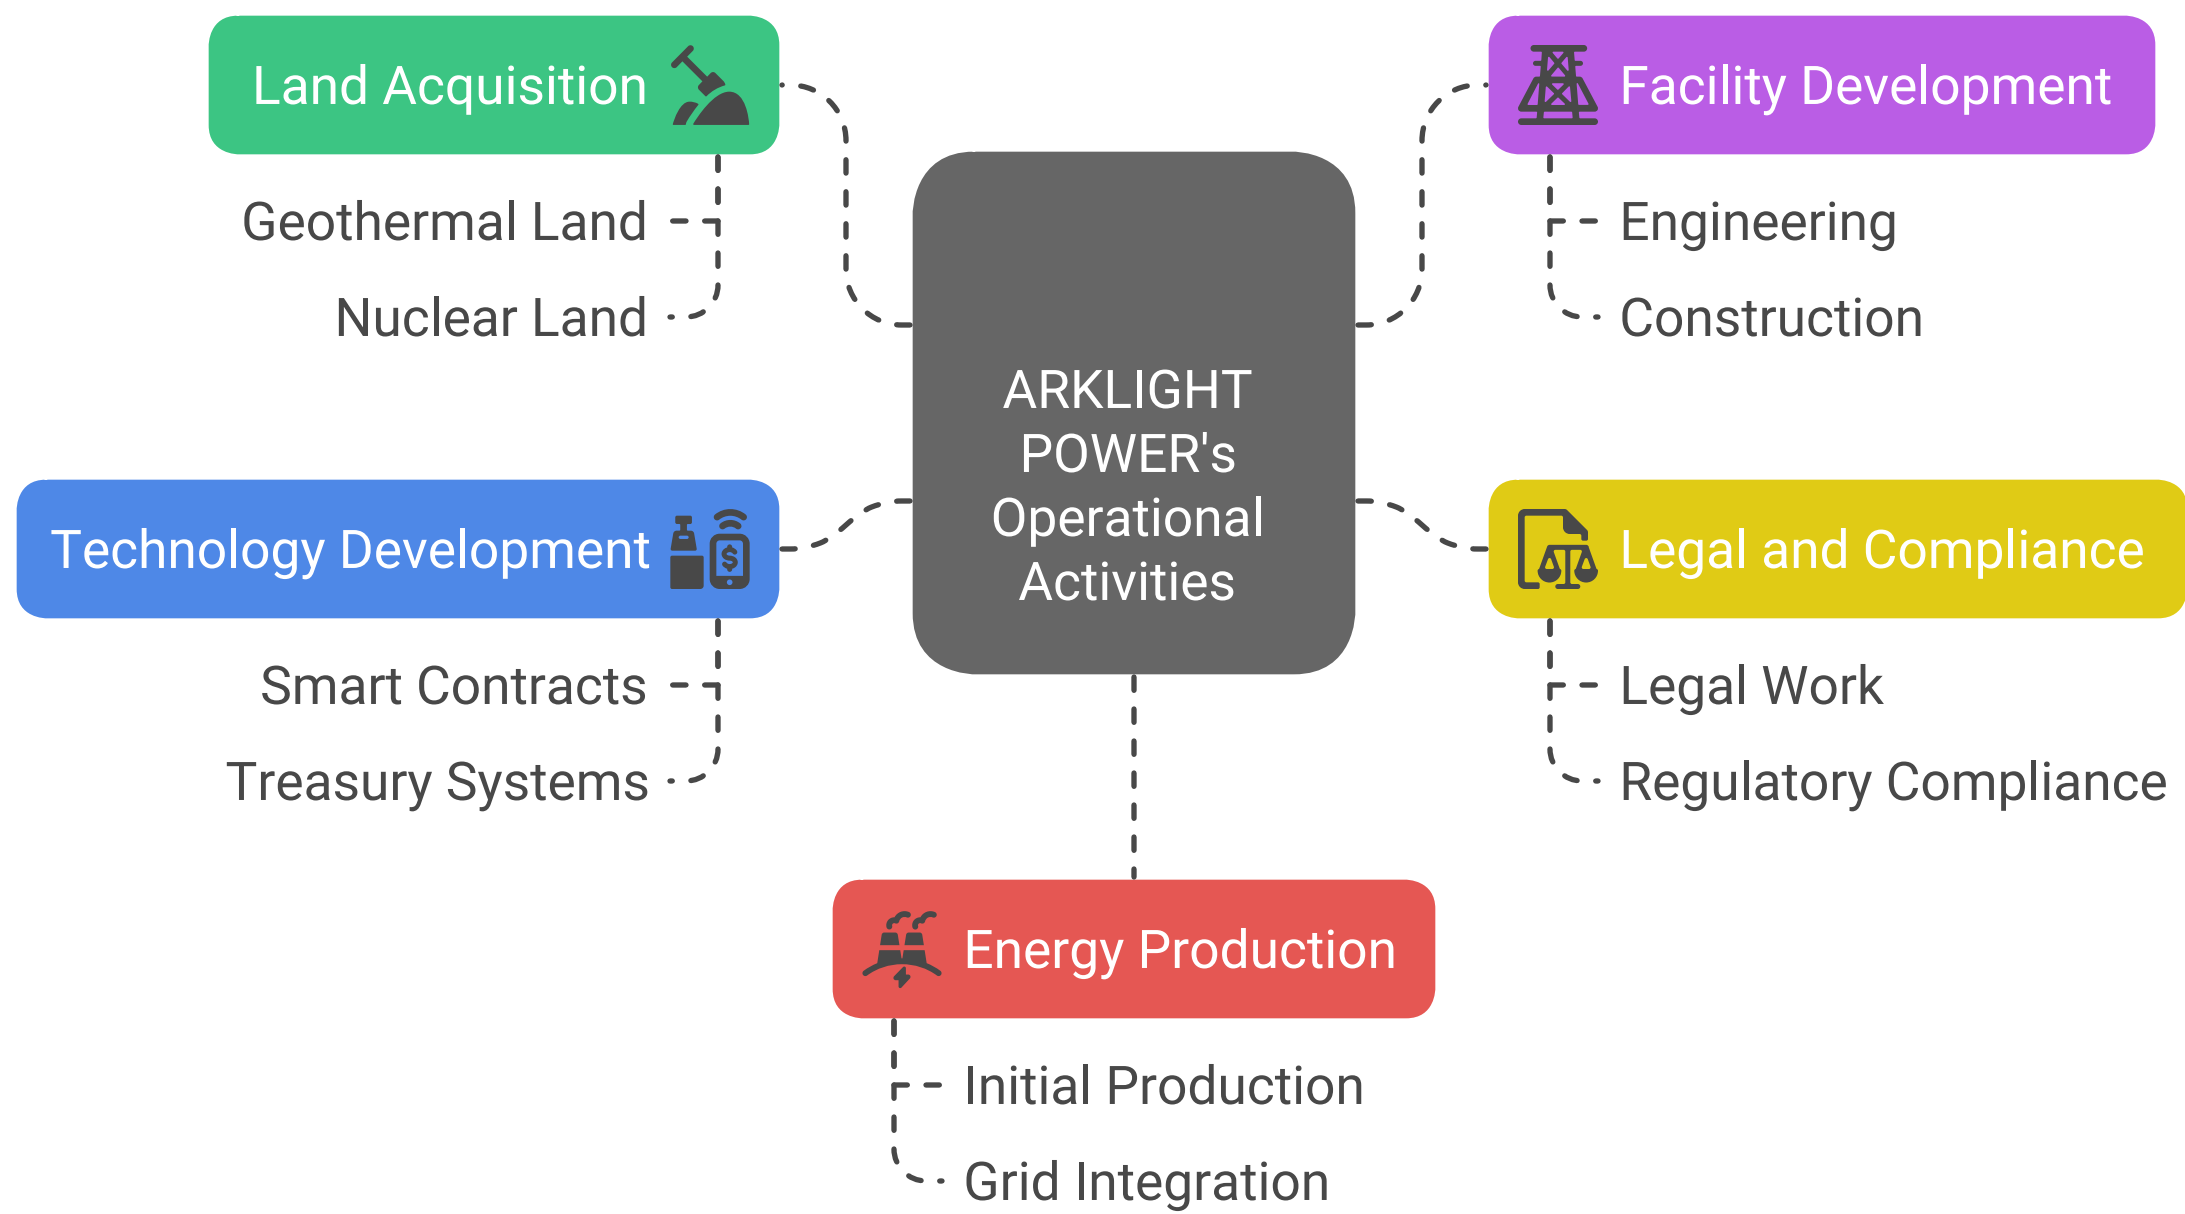

ARKLIGHT POWER Ecosystem: Structure and Utility

Use of Funds

- • Acquisition of geothermal/nuclear land and leaseholds
- • Engineering and construction of power facilities
- • Legal, compliance, and regulatory work
- • Smart contract development and treasury systems
- • Initial energy production, storage, and grid integration

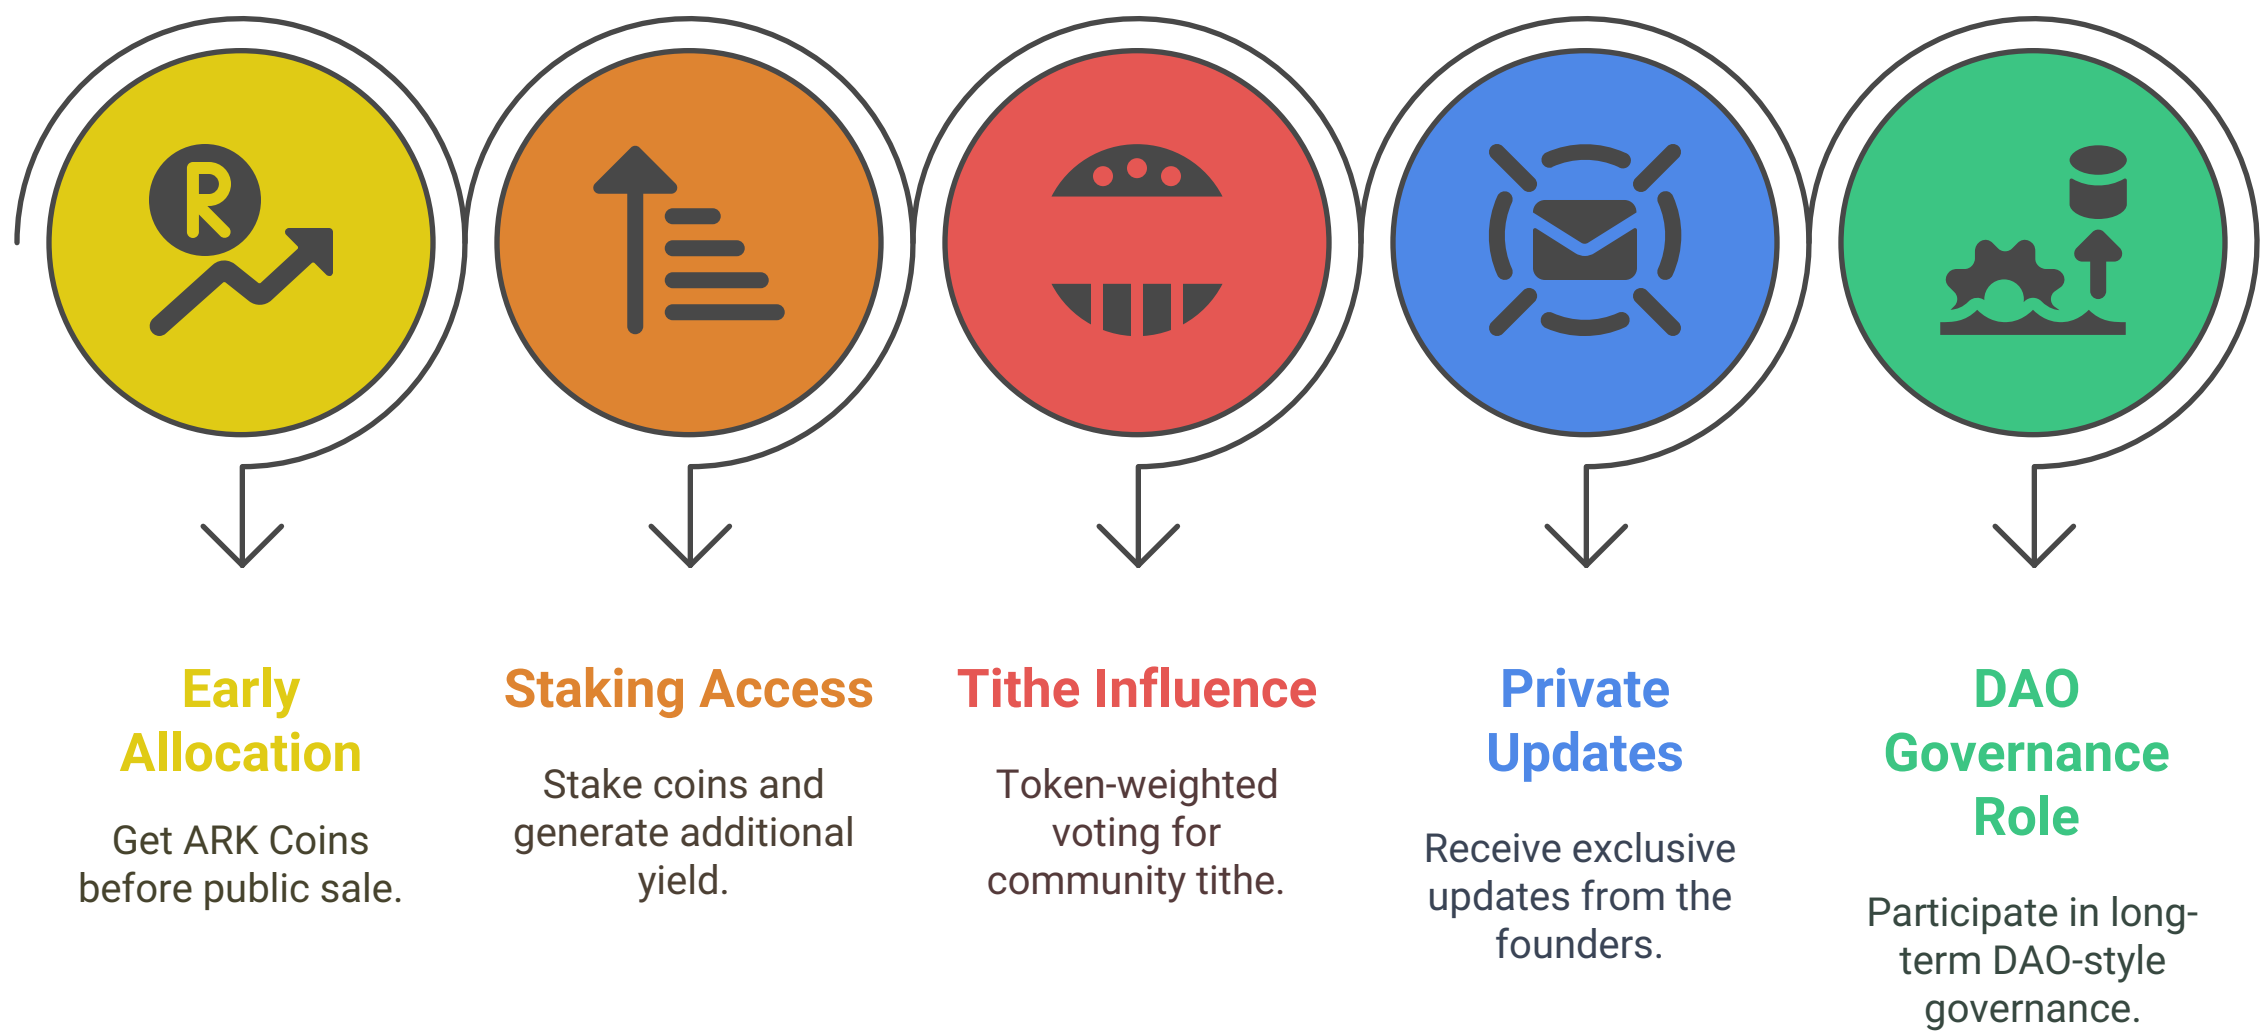

ARKLIGHT POWER's Operational Activities

Founder Benefits

- • Early allocation of ARK Coins
- • Staking and yield generation access
- • Tithe influence through token-weighted voting
- • Private updates and founder briefings
- • Role in long-term DAO-style governance

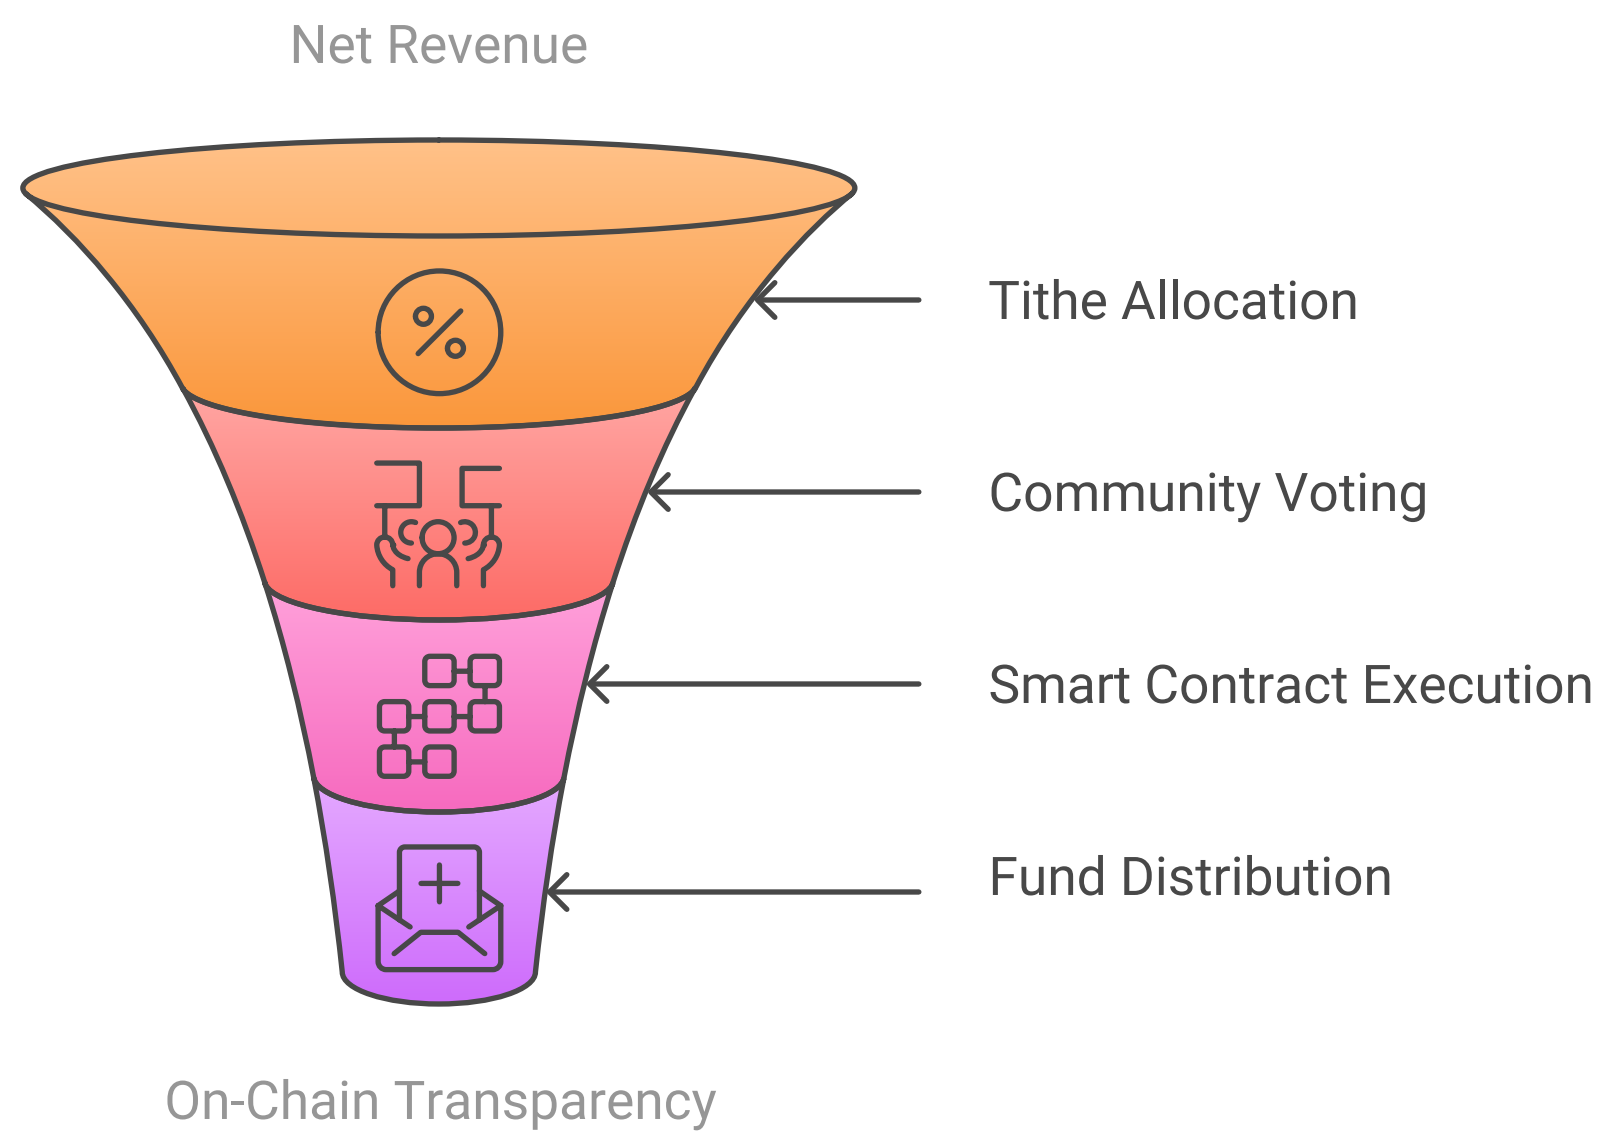

ARK Coin Benefits

The Tithe Engine

- 10% of all net revenue is tithed—without fail.
- Smart contracts automate the flow based on community votes.
- Funds are directed to pre-vetted ministries, missionaries, and media outreach.
- Every transaction is visible and accountable on-chain.

Tithe Distribution Process

The 3-Layer Utility Model

- ARKs are limited governance tokens representing long-term ownership and authority.
- Joules provide mid-level participation, energy access, and eligibility to stake or wrap.
- Sparks power real-world action—giving, voting, access—down to the smallest level.

Token Governance Levels

ARKs

Represents long-term ownership and authority in governance.

Joules

Provides mid-level participation and energy access for users.

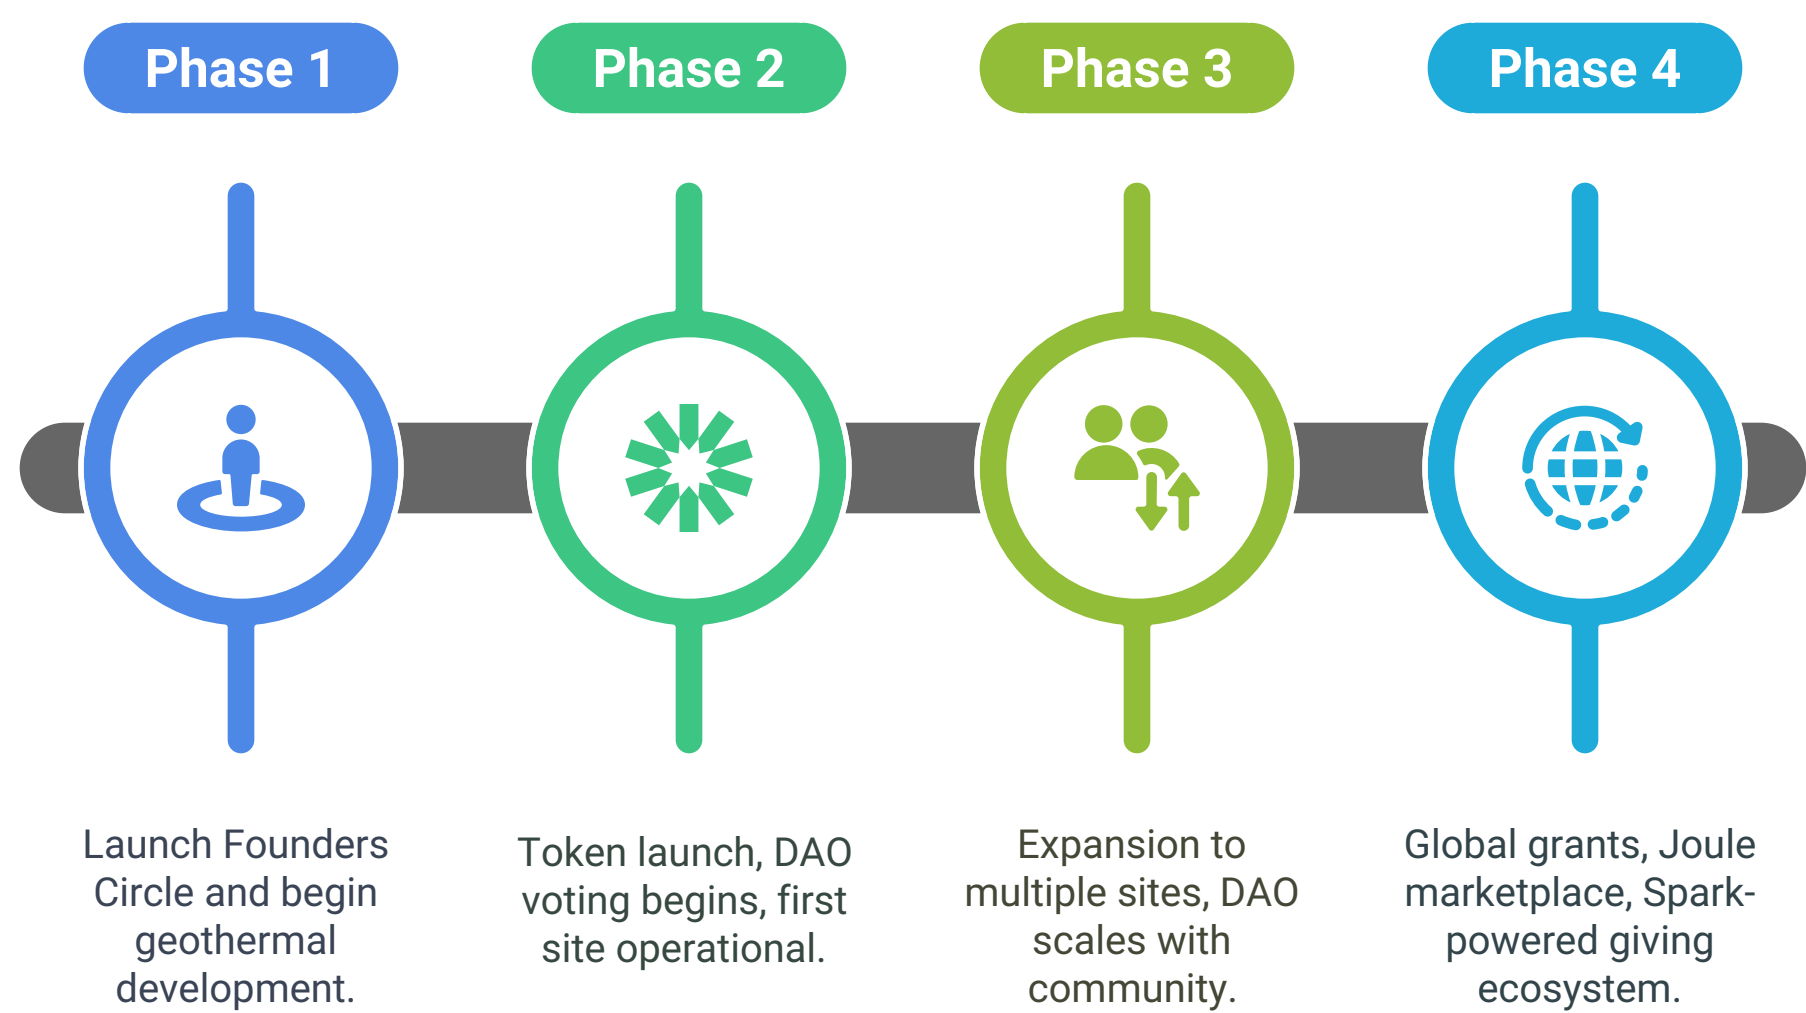

Sparks

Powers real-world actions like giving and voting access.

Roadmap

- Phase 1: Launch Founders Circle and begin geothermal development.
- Phase 2: Token launch, DAO voting begins, first site operational.
- Phase 3: Expansion to multiple sites, DAO scales with community.
- Phase 4: Global grants, Joule marketplace, Spark-powered giving ecosystem.

Arklight Power's Strategic Development Phases

Why Now

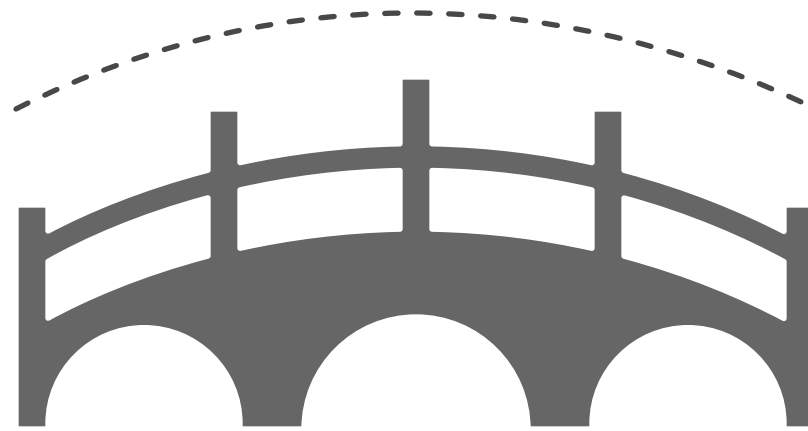

- • Energy systems are collapsing in real time.
- • Censorship and politicization are infecting infrastructure.
- • The Church must stop funding Babylon—and start building an alternative.

Arklight Power transitions from collapsing systems to building alternatives.

Collapsing Systems

Infrastructure is failing.

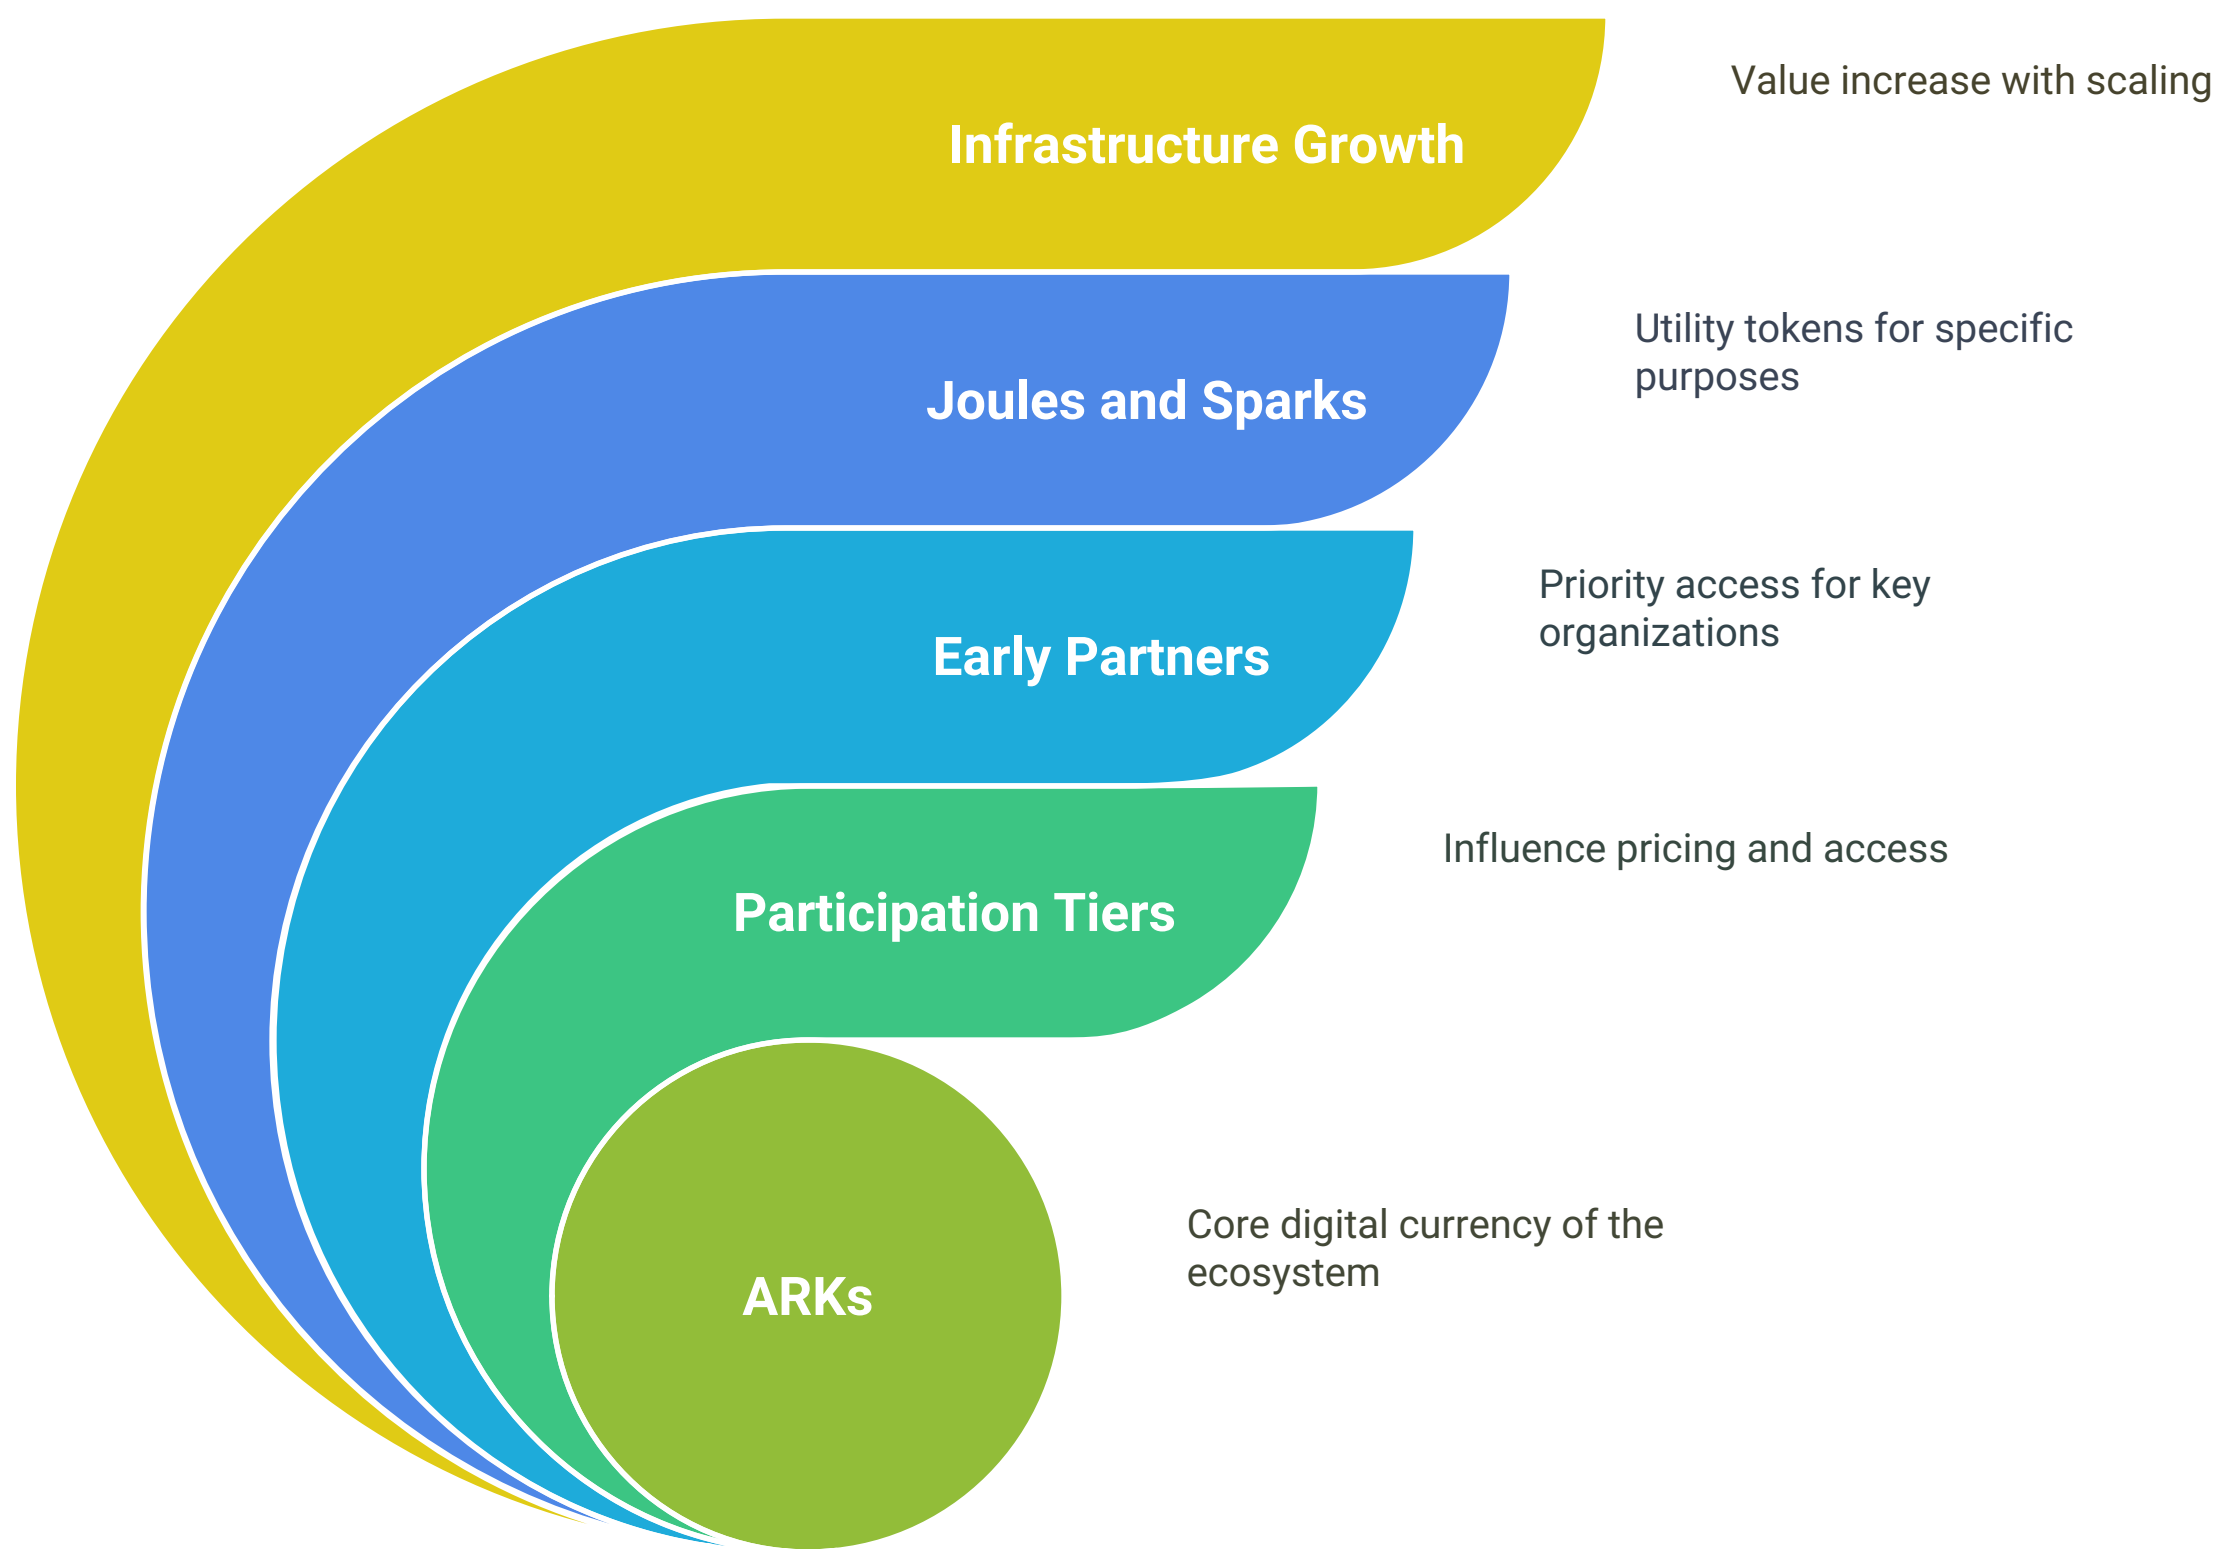

Thriving Infrastructure

Systems are secure and independent.

Initial Pricing Strategy

- ARKs may launch between \$1 to \$10 per coin depending on participation tier.
- Early partners—including churches and mission organizations—receive priority access.
- Joules and Sparks are distributed based on allocation and purpose.
- As infrastructure scales, value increases with revenue and participation.

ARKLIGHT POWER Ecosystem

Join Us

- The Founders Circle is open now for early supporters, leaders, and builders of faith.
- Secure your position in the ARK ecosystem before the first site goes live.
- Email: b@arklightpower.org
- Website: <https://arklightpower.org>
- Phone: [808] 419-0969
